

Job Title: Production Engineer

Department: Production

Location: Maldon, Essex

Calorex Heat Pumps Ltd is the Leading British manufacturer of heat pumps and dehumidifiers.

Job Specification:

Based at our headquarter offices in Essex, the successful candidate will be given an outstanding opportunity to grow and develop their skills and experience, drawing on the Company's 30 years of market specialisation.

Working with the production teams, you will be expected to learn thoroughly and extensively about the Calorex product range.

The successful applicant will be expected to assess and to initiate projects to improve profitability and quality: for example - production efficiency and quality procedures; waste reduction; analysis of material usages and failures; action correction plans; implementation of new assembly techniques, etc.

The incumbent will also be required to produce health and safety risk assessments, working closely with the company's health and safety officer.

Once trained and given a suitable level of progression and aptitude, the role will further develop, involving considerable travel opportunities and responsibilities, encompassing product launches and the supervision of proposed satellite manufacturing operations in China and Eastern/Middle Europe.

Education & Competencies:

Applicants must have attained a Mechanical Engineering Degree or HND qualification, possess a strong outgoing personality, be an active team player and be capable of communicating concisely, orally and in writing, at all levels.

Salary and Benefits:

Salary according to experience, 25 days holiday per annum. Life assurance, quarterly bonus and pension scheme after qualifying period. The official hours of work are 37.5 hours per week, though in reality the hours will reflect the needs of the tasks in hand at any time.

Please send CV's to: Helen Meadows (Human Resources and Health and Safety Advisor)
